

HYMA

SF

SACK FILLER

For the filling of waste into polyethylene sacks and sacks of other materials.

Indispensable, ancillary equipment for the foam-waste conversion section of your factory.

The equipment can be supplied with ducting and blowers etc. to go 'in line' with your granulating machine.

Used in many industries to solve paper, textile, plastic waste problems.

Let HYMA suggest ways and means to solve your particular problems, and to make waste into profit.
